

# Study Guide and Review

## Study Guide

### Key Concepts

#### Points, Lines, and Planes (Lesson 1-1)

- There is exactly one line through any two points.
- There is exactly one plane through any three noncollinear points.

#### Distance and Midpoints (Lesson 1-3)

- On a number line, the measure of a segment with endpoint coordinates  $a$  and  $b$  is  $|a - b|$ .
- In the coordinate plane, the distance between two points  $(x_1, y_1)$  and  $(x_2, y_2)$  is given by  $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$ .
- On a number line, the coordinate of the midpoint of a segment with endpoints  $a$  and  $b$  is  $\frac{a + b}{2}$ .
- In the coordinate plane, the coordinates of the midpoint of a segment with endpoints that are  $(x_1, y_1)$  and  $(x_2, y_2)$  are  $(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2})$ .

#### Angles (Lessons 1-4 and 1-5)

- An angle is formed by two noncollinear rays that have a common endpoint, called its vertex. Angles can be classified by their measures.
- Adjacent angles are two coplanar angles that lie in the same plane and have a common vertex and a common side but no common interior points.
- Vertical angles are two nonadjacent angles formed by two intersecting lines.
- A linear pair is a pair of adjacent angles with noncommon sides that are opposite rays.
- Complementary angles are two angles with measures that have a sum of 90.
- Supplementary angles are two angles with measures that have a sum of 180.

### FOLDABLES Study Organizer

Be sure the Key Concepts are noted in your Foldable.

### Key Vocabulary

- acute angle (p. 38)
- adjacent angles (p. 46)
- angle (p. 36)
- angle bisector (p. 30)
- area (p. 50)
- base (p. 67)
- between (p. 15)
- circumference (p. 58)
- collinear (p. 5)
- complementary angles (p. 47)
- concave (p. 56)
- cone (p. 67)
- congruent (p. 16)
- construction (p. 17)
- convex (p. 56)
- coplanar (p. 5)
- cylinder (p. 67)
- degree (p. 37)
- distance (p. 25)
- edge (p. 67)
- equiangular polygon (p. 57)
- equilateral polygon (p. 57)
- exterior (p. 36)
- face (p. 67)
- interior (p. 36)
- intersection (p. 6)
- line (p. 5)
- line segment (p. 14)
- linear pair (p. 46)
- midpoint (p. 27)
- $n$ -gon (p. 57)
- obtuse angle (p. 38)
- opposite rays (p. 36)
- perimeter (p. 58)
- perpendicular (p. 48)
- plane (p. 5)
- Platonic solid (p. 68)
- point (p. 5)
- polygon (p. 56)
- polyhedron (p. 67)
- prism (p. 67)
- pyramid (p. 67)
- ray (p. 36)
- regular polygon (p. 57)
- regular polyhedron (p. 68)
- right angle (p. 38)
- segment bisector (p. 29)
- side (p. 36)
- space (p. 7)
- sphere (p. 67)
- supplementary angles (p. 47)
- surface area (p. 69)
- undefined term (p. 5)
- vertex (pp. 36, 67)
- vertex of a polygon (p. 56)
- vertical angles (p. 46)
- volume (p. 69)

### Vocabulary Check

Fill in the blank in each sentence with the vocabulary term that best completes the sentence.

1. A \_\_\_\_\_ is a flat surface made up of points that extends infinitely in all directions.
2. A set of points that all lie on the same line are said to be \_\_\_\_\_.
3. If two lines intersect to form four right angles, the lines are called \_\_\_\_\_.
4. If the sum of the measures of two angles is 180, then the angles are called \_\_\_\_\_ angles.

# Lesson-by-Lesson Review

SPI 3108.1.1, CLE 3108.4.1, ✓3108.4.6

## 1-1 Points, Lines, and Planes (pp. 5–12)

Use the figure to complete each of the following.

- Name the intersection of lines  $a$  and  $c$ .
- Give another name for line  $b$ .
- Name a point that is not contained in any of the three lines  $a$ ,  $b$ , or  $c$ .
- Give another name for plane  $WPX$ .

Name the geometric term that is best modeled by each item.

### Example 1

Draw and label a figure for the relationship below.

Plane  $X$  contains line  $a$ , line  $b$  intersects line  $a$  at point  $Q$ , but line  $b$  is not in plane  $X$ .

Draw a surface to represent plane  $X$  and label it.

Draw a line in plane  $X$  and label it line  $a$ .

Draw a line  $b$  intersecting both the plane and line  $a$  and label the point of intersection  $Q$ .

## 1-2 Linear Measure (pp. 14–21)

Find the value of the variable and  $XP$ , if  $X$  is between  $P$  and  $Q$ .

- $XQ = 13$ ,  $XP = 5x - 3$ ,  $PQ = 40$
- $XQ = 3k$ ,  $XP = 7k - 2$ ,  $PQ = 6k + 16$

Determine whether each pair of segments is congruent.

13.  $\overline{AB}$ ,  $\overline{CD}$

14.  $\overline{XY}$ ,  $\overline{YZ}$

- DISTANCE** The distance from Salvador's job to his house is 3 times greater than the distance from his house to school. If his house is between his job and school and the distance from his job to school is 6 miles, how far is it from Salvador's house to school?

### Example 2

Use the figure to find the value of the variable and the length of  $\overline{YZ}$ .

$XZ = XY + YZ$	Betweenness of points
$29 = 10 + 3x + 7$	Substitution
$29 = 3x + 17$	Simplify.
$12 = 3x$	Subtract 17 from each side.
$4 = x$	Divide each side by 3.
$YZ = 3x + 7$	Given
$= 3(4) + 7$ or 19	Substitution
So, $x = 4$ and $YZ = 19$ .	

✓3108.4.3

### 1-3 Distance and Midpoints (pp. 25-35)

Find the distance between each pair of points.

16.  $A(-3, 1), B(7, 13)$
17.  $P(2, -1), Q(10, -7)$

Find the coordinates of the midpoint of a segment with the given endpoints.

18.  $L(-3, 16), M(17, 4)$
19.  $Q(32, -1), D(0, -12)$

Find the coordinates of the missing endpoint if  $M$  is the midpoint of  $\overline{XY}$ .

20.  $X(-11, -6), M(15, 4)$
21.  $M(-4, 8), Y(19, 0)$

22. **HIKING** Carol and Marita are hiking in a state park and decide to take separate trails. The map of the park is set up on a coordinate grid. Carol's location is at the point  $(7, 13)$  and Marita is at  $(3, 5)$ .
  - a. Find the distance between them.
  - b. Find the coordinates of the point midway between their locations.

#### Example 3

Find the distance between  $X(5, 7)$  and  $Y(-7, 2)$ .

Let  $(x_1, y_1) = (5, 7)$  and  $(x_2, y_2) = (-7, 2)$ .

$$\begin{aligned} d &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \\ &= \sqrt{(-7 - 5)^2 + (2 - 7)^2} \\ &= \sqrt{(-12)^2 + (-5)^2} \\ &= \sqrt{169} \text{ or } 13 \end{aligned}$$

The distance from  $X$  to  $Y$  is 13 units.

#### Example 4

Find the coordinates of the midpoint between  $P(-4, 13)$  and  $Q(6, 5)$ .

Let  $(x_1, y_1) = (-4, 13)$  and  $(x_2, y_2) = (6, 5)$ .

$$\begin{aligned} M\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right) &= M\left(\frac{-4 + 6}{2}, \frac{13 + 5}{2}\right) \\ &= M(1, 9) \end{aligned}$$

The coordinates of the midpoint are  $(1, 9)$ .

### 1-4 Angle Measure (pp. 36-44)

For Exercises 23-26, refer to the figure below.

23. Name the vertex of  $\angle 7$ .
24. Write another name for  $\angle 4$ .
25. Name the sides of  $\angle 2$ .
26. Name a pair of opposite rays.

27. **SIGNS** A sign at West High School has the shape shown. Measure each of the angles and classify them as *right*, *acute*, or *obtuse*.

#### Example 5

Refer to the figure below. Name all angles that have  $Q$  as a vertex.

$\angle OQN, \angle NQP, \angle PQR, \angle RQS, \angle SQO, \angle OQP, \angle NQR, \angle PQS, \angle OQR$

#### Example 6

In the figure above, list all other names for  $\angle 1$ .

$\angle NOQ, \angle QON, \angle MOQ, \angle QOM, \angle MOR, \angle ROM, \angle NOR, \angle RON$

## 1-5 Angle Relationships (pp. 46-54)

For Exercises 28-30, refer to the figure below.

28. Name an angle supplementary to  $\angle TVY$ .
29. Name a pair of vertical angles with vertex  $W$ .
30. If  $m\angle SXW = 5x - 16$ , find the value of  $x$  so that  $\overline{SX} \perp \overline{WY}$ .
31. **PARKING** The parking arm shown below rests in a horizontal position and opens to a vertical position. After the arm has moved  $24^\circ$ , how many more degrees does it have to move so that it is vertical?

### Example 7

Name a pair of supplementary angles and a pair of complementary angles in the figure below.

Sample answers:

Supplementary angles:  $\angle RXA$  and  $\angle RXD$

Complementary angles:  $\angle RXC$  and  $\angle CXD$

## 1-6 Two-Dimensional Figures (pp. 56-64)

Name each polygon by its number of sides. Then classify it as *convex* or *concave* and *regular* or *irregular*.

34. Find the perimeter of quadrilateral  $ABCD$  with vertices  $A(-3, 5)$ ,  $B(0, 5)$ ,  $C(2, 0)$ , and  $D(-5, 0)$ .
35. **PARKS** Westside Park received 440 feet of chain-link fencing as a donation to build an enclosed play area for dogs. The park administrators need to decide what shape the area should have. They have three options: (1) a rectangle with length of 100 feet and width of 120 feet, (2) a square with sides of length 110 feet, or (3) a circle with radius of approximately 70 feet. Find the areas of all three enclosures and determine which would provide the largest area for the dogs.

### Example 8

Name the polygon by its number of sides. Then classify it as *convex* or *concave* and *regular* or *irregular*.

There are 6 sides, so this is a hexagon. If two of the sides are extended to make lines, they will pass through the interior of the hexagon, so it is concave. Since it is concave, it cannot be regular.

### Example 9

Find the perimeter of the polygon in the figure above.

$$\begin{aligned}
 P &= s_1 + s_2 + s_3 + s_4 + s_5 + s_6 && \text{Definition of perimeter} \\
 &= 7 + 7 + 9 + 6 + 6 + 4 && \text{Substitution} \\
 &= 39 && \text{Simplify.}
 \end{aligned}$$

The perimeter of the polygon is 39 units.

## Three-Dimensional Figures (pp. 67-74)

Identify each solid. Name the bases, faces, edges, and vertices.

Find the surface area and volume of each solid.

42. **BUILDING** Chris is building a trunk like the one shown below. His design is a square prism. What is the volume of the trunk?

43. **HOCKEY** A regulation hockey puck is a cylinder made of vulcanized rubber 1 inch thick and 3 inches in diameter. Find the surface area and volume of a hockey puck.

### Example 10

Identify the solid below. Name the bases, faces, edges, and vertices.

This solid has congruent circular bases in a pair of parallel planes. So, it is a cylinder.

Bases: circle *O* and circle *P*

A cylinder has no faces, edges, or vertices.

### Example 11

Find the surface area and volume of the rectangular prism below.

$$\begin{aligned} T &= Ph + 2B && \text{Surface area of a prism} \\ &= (48)(9) + 2(135) && \text{Substitution} \\ &= 702 && \text{Simplify.} \end{aligned}$$

The surface area is 702 square inches.

$$\begin{aligned} V &= Bh && \text{Volume of a prism} \\ &= (135)(9) && \text{Substitution} \\ &= 1215 && \text{Simplify.} \end{aligned}$$

The volume is 1215 cubic inches.

# Practice Test

Use the figure to name each of the following.

- the line that contains points  $Q$  and  $Z$
- two points that are coplanar with points  $W$ ,  $X$ , and  $Y$
- the intersection of lines  $a$  and  $b$

Find the value of the variable if  $P$  is between  $J$  and  $K$ .

- $JP = 2x$ ,  $PK = 7x$ ,  $JK = 27$
- $JP = 3y + 1$ ,  $PK = 12y - 4$ ,  $JK = 75$
- $JP = 8z - 17$ ,  $PK = 5z + 37$ ,  $JK = 17z - 4$

Find the coordinates of the midpoint of a segment with the given endpoints.

- $(16, 5)$  and  $(28, -13)$
- $(-11, 34)$  and  $(47, 0)$
- $(-4, -14)$  and  $(-22, 9)$

Find the distance between each pair of points.

- $(43, -15)$  and  $(29, -3)$
- $(21, 5)$  and  $(28, -1)$
- $(0, -5)$  and  $(18, -10)$
- ALGEBRA** The measure of  $\angle X$  is 18 more than three times the measure of its complement. Find the measure of  $\angle X$ .
- Find the value of  $x$  that will make lines  $a$  and  $b$  perpendicular in the figure below.

For Exercises 15–18, use the figure below.

- Name the vertex of  $\angle 3$ .
- Name the sides of  $\angle 1$ .
- Write another name for  $\angle 6$ .
- Name a pair of angles that share exactly one point.
- MULTIPLE CHOICE** If  $m\angle 1 = m\angle 2$ , which of the following statements is true?
  - $\angle 2 \cong \angle 4$
  - $\angle 2$  is a right angle.
  - $\ell \perp m$
  - All of the above

Find the perimeter of each polygon.

- triangle  $XYZ$  with vertices  $X(3, 7)$ ,  $Y(-1, -5)$ , and  $Z(6, -4)$
- rectangle  $PQRS$  with vertices  $P(0, 0)$ ,  $Q(0, 7)$ ,  $R(12, 7)$ , and  $S(12, 0)$
- SAFETY** A severe weather siren in a local city can be heard within a radius of 1.3 miles. If the mayor of the city wants a new siren that will cover double the area of the old siren, what should the radius of the new siren be? Round to the nearest tenth of a mile.

Refer to the figure at the right.

- Name the base.
- Find the surface area.
- Find the volume.
